PROJECTS

VolunteerGo | GitHub
A platform for two separate user groups: volunteers to find and send requests for opportunities near them, and non-profit organizations that can approve or decline these requests. Built backend using Express and Node.js. Front-end functionalities and styling were built with the Google Maps API, React.js and CSS3.

Feathers | GitHub | Live
A full stack application that pairs solo travelers with one another based on their characteristics and travel partner preferences. Used Express and Node.js to develop API endpoints and set-up database using PostgreSQL. Overhauled UI based on user-testing feedback. Demo-ed app for an audience at Venmo.

VACCessNYC | GitHub | Live
Application that helps local New Yorkers find flu vaccination centers near them using an NYC OpenData API. Built using Javascript, React.js, HTML5/CSS3, and Google-Map-React during C4Q's annual hackathon.
